Summary

Ambitious Assistant System Engineer with experience delivering complex solo and team-based projects. Expert at adapting to achieve ongoing projects and eager to take ownership of new initiatives. Integral to software and system development efforts with focus on continually enhancing proficiencies.

Experience

Tata Consultancy Services Limited

Assistant System Engineer

Pune

July 2022 - Present

Working as Cloud Engineer in DevOps domain.

Worked on Multinational Automobile Manufacturer Company project for major client of TCS.

Established continuous build environments to speed up software development by 41%.

Created suitable DevOps channels across the organization, leading to 99% of deadlines being met.

Developed 20+ automations for provisioning compute instances and storage.

Projects

Jaguar and Land Rover

Project Role - Devops Engineer

- As a DevOps Engineer, I was instrumental in automating and streamlining the development and deployment processes. I worked closely with development and IT teams to enhance the CI/CD pipelines using Jenkins, ensuring efficient and reliable software delivery.
- My role involved extensive use of Docker for containerization, which allowed for consistent and scalable application deployment across multiple environments. I also managed and orchestrated these containers using Kubernetes, ensuring high availability, scalability, and seamless updates.
- Additionally, I was responsible for infrastructure as code (IaC) using tools like Terraform and Ansible, and I monitored system performance to ensure uptime and optimal resource utilization.
- My efforts resulted in significantly reduced deployment times, improved system reliability, and more efficient resource management.
